

Lucas Dantas de Oliveira

Senior Backend Engineer · Go & AWS

lucantas.dev@gmail.com | (21) 98094-1128 | linkedin.com/in/lucantas | github.com/Lucantas | lucantas.github.io/portfolio | Remote from Brazil (UTC-3)

ABOUT

Backend engineer focused on Go and serverless on AWS, shipping production software since 2017 and freelancing since 2015. Claude and Cursor are part of my daily workflow.

EXPERIENCE

Senior Software Engineer · *Personare.com.br*

Jun 2022 – Present · Rio de Janeiro, RJ

- Architected and led the migration of ~15 critical payment and cart APIs from a PHP monolith to Go on AWS SAM/Lambda: ~30% lower infrastructure cost and latency from ~3s to milliseconds, on routes used by millions.
- Moved invoice (Nota Fiscal) issuing from the city system to the national one without stopping billing, and fixed security vulnerabilities in the website and internal systems.
- Built the internal admin panel from scratch: Next.js/React front end with Google sign-in and per-resource permissions, Go API on 15 Lambdas with clean architecture, an 80% coverage gate and an audit trail.
- Expanded observability across 11 serverless services with CloudWatch alarms (errors, latency, throughput, memory), log-based error metrics and severity-based alerts, all as code.
- On the Go astrology-calculation APIs (Swiss Ephemeris), built the eclipses endpoint and migrated the Professional Chart from legacy PHP to Go, with parity proven by tests against the legacy output.

Software Developer · *Mundiware*

Nov 2017 – Jun 2022 · 4 years 8 months · Rio de Janeiro, RJ

- Started as a web design technician and became a software developer within a year.
- Migrated the print newspaper and online classifieds ad system from Visual Basic to C#/.NET Core and the web, on SQL Server.
- Built the TV ad management module.
- Built ETLs that bring ads from several suppliers into the online classifieds automatically.
- Extended the in-house template language to make web development easier and rendering lighter.

Freelance Web Developer · *Self-employed*

Sep 2015 – Jun 2022 · 6 years 10 months · São Gonçalo, RJ

Websites and web applications for clients across several industries, handling scope, deadlines, and delivery on my own.

SELECTED PROJECTS

- **Diário SG:** pipeline that OCRs and splits São Gonçalo's official gazettes into ~162,000 searchable acts, cross-checks companies against public data, sends alerts and exposes an MCP server with 12 tools. Go and Postgres on free tiers, live at diariosg.com.br.
- **Longa:** running app that rewrites the training plan from what you actually ran. Expo/React Native, Go API on Fly.io, on-device TypeScript plan engine, Stripe. Live at app.longa.run.
- **Morada:** condominium management with Pix payments. React 19, Hono, Postgres (Neon), Cloudflare R2. 900+ tests behind an 80% coverage gate, Playwright in CI.

TECHNICAL SKILLS

Languages	Go (primary), Node.js / TypeScript, PHP
Cloud & Infra	AWS Lambda, SAM, CloudFormation, CloudWatch, AppSync, Terraform, Docker, Google Cloud, Fly.io, Cloudflare
Databases	PostgreSQL, MySQL, DynamoDB
Architecture	Microservices, Clean Architecture, REST APIs, Serverless, event-driven
Frontend	React, Next.js, React Native / Expo
AI & Tools	Claude, Cursor, MCP servers

EDUCATION

Self-Taught in Software Engineering

Learned through real projects since 2015, with ongoing study of fundamentals and current tooling.

LANGUAGES

Portuguese (native) · English (advanced)
